

Money Penny — Voice Commands

Benjamin Branson Bookkeeping · Voice Ledger · kept in step with the app (a test fails if any phrase below stops working)

How to talk to her: press the microphone button (top left), then speak normally. Filler is fine — "hey Money Penny", "please", "can you", "the" are ignored. Say numbers as digits or words: "\$1,420", "fourteen twenty", "twelve hundred dollars". She hears "owe" as "own" sometimes; both work. **Keyboard: Tab** = cut her off and listen again. **Tab** or "try again" after a wrong answer. The red mic button turns the microphone off. ` (the key left of 1) closes a pop-up card. **Every number she says comes straight from your books — the same figures as the pages.** She also tells you if the data is stale ("saved data from 2 hours ago — sync to refresh").

1. Go to any page

Say: **go to / open / pull up / take me to / show me + the page name.** Example: *"go to profit and loss"* → opens the Profit & Loss page and says its name.

Page you can name	Also works as
Dashboard	home
Charts & Cards	all charts, all cards, chart gallery
Findings	findings list
Firm Cockpit	cockpit
Cash Flow Forecast	forecast
Search by Amount	search
Pricing Calculator	pricing
Intake Questions	intake
Compliance Calendar	compliance, deadlines, due dates, tax calendar, sales by state, economic nexus
Scope Requests	out of scope, add ons
Industry Setup	industry
Client Diagnostics	diagnostics
Cleanup Assessment	cleanup
Balance Sheet Integrity	—
Chart of Accounts	chart of accounts cleanup
Bank Feed Cleanup	bank feed, bank
Batch Fixes	batch fix
Sales Tax Review	sales tax
Recurring Vendors	recurring
Month-End Close	month end, monthly close, close the books
Close Package	—
Activity Log	correction log
Balance Sheet	—
Profit & Loss	p and l, profit and loss

Page you can name	Also works as
Cash Flow	cash flow report
Trial Balance	—
Aged Receivables	receivables, accounts receivable
Aged Payables	payables, accounts payable
General Ledger	—
Taxes	tax
Client Memory	—
Voice History	AI conversations
Connection	—
Scope & Period Lock	scope and period lock
Audio Settings	—

"Go back" → returns to the page you were just on (it remembers up to 50 steps). **"Go forward"** → undoes a go-back.

2. Findings (the problems the app found)

Say	What happens
"pull up the duplicates" (also "show me duplicates", "open duplicate transactions")	Opens Cleanup Assessment and says how many duplicate pairs are open, the total dollars at risk, and the largest.
"show me the uncategorized transactions" (also "miscategorized")	Opens Cleanup Assessment; says the count and total.
"pull up the negative balances" (also "overdrawn accounts")	Opens Balance Sheet Integrity; says count and total.
"show me the personal expenses" (also "owner draws")	Opens Cleanup Assessment; says count and total.
"show me the late fees" · "price increases"	Same, for fee findings and vendor price-increase findings.
"balance sheet issues" · "suspense"	Opens Balance Sheet Integrity.
"show me all open findings" (also "what's open", "everything open")	Opens Findings; says the total open and dollars.
"open the \$1,420 one" · "pull up the fourteen twenty finding"	Opens the one finding with that exact dollar amount. If several match, she lists them and asks which.
"pull up the Cool Cars payment" · "open the duplicate invoice"	Opens the finding that matches the name or words.
"why is this flagged" · "what should I do" · "fix it"	Explains the finding that's open on screen and what the app recommends. (The only answer that uses the AI model; its figures are checked against your data.)

3. Look up an amount

Say	What happens
"find \$1,420" · "find fourteen twenty" · "search for \$500" · "any transaction for 3,293.02"	Searches the current month and the 24-month history for that exact amount. If the amount is an account balance , she says which account and how many postings make it up. If no single transaction matches, she looks for 2–3 that add up to it. Opens Search by Amount with the matches on screen, each with an Open in QBO link.
"find Hicks Hardware"	Says the vendor's transaction count and total, and opens Search by Amount listing every one of their transactions, each with an Open in QBO link.

4. Balances and what we owe

Say	What happens
"what's the balance of the sweeper checking account" · "how much is in savings" · "balance of Mastercard"	Says the account's current QuickBooks balance (overdrawn = in parentheses).
"what do we owe" · "how much do we owe" · "what bills are due"	Says total payables, how much is over 60 days past due, less credits; opens Aged Payables.
"what do we owe Norton Lumber"	Says what we owe that vendor — current vs. past due vs. over 90 days. For a vendor paid as each charge happens (like Gusto Payroll), she says nothing is owed and how many charges were paid.
"review September" · "switch to August" · "go to July"	Changes the month being reviewed (the app opens on the last finished month). You can also click the month under the company name in the sidebar.
"do the numbers tie" · "check the math" · "does everything tie"	Proves every key figure against QuickBooks' own totals, to the cent: balance sheet, trial balance, who owes us, what we owe, profit, cash. Any that doesn't tie is named with the exact difference.
"who owes us" · "what are we owed" · "what do customers owe us"	Says what customers owe, the credits, the net (matches the page TOTAL) and how much is over 60 days old; opens Aged Receivables.
"who owes us the most" · "which customer owes us the most" · "who do we owe the most"	Names the biggest customer (or vendor) balance, how much is over 60 days, and who is next; opens the aging page with a card.
"what does Freeman Sporting Goods owe us" · "how much does Kate Whelan owe us"	One customer's open balance: current, past due, over 90 days. Pops up their card.
"is there anything unusual with Permian Supply" · "any issues with Cool Cars"	Every open finding for that vendor or customer, largest first, with a card.
"how much did we make this month" · "are we profitable"	Net income for the month, with the 12-month chart.
"working capital" · "current ratio" · "quick ratio" · "gross margin" · "net margin"	Says the figure and pops up the Financial Health card: what makes it up, what it means, what to check.
"how much have we paid Tania's Nursery" · "transactions from Hicks Hardware"	Shows that vendor's count, total and last date.

5. Quick numbers

Say	What happens
"what's our revenue this month" · "what was revenue last month"	Says revenue (total income) for the loaded month, or the month before.
"what's our net income" · "what's our profit"	Says net income.
"what's our cash balance" · "how much cash do we have"	Says total bank balances.
"what's due" · "next deadline" · "when is sales tax due"	Reads the next three dates on this client's compliance calendar and opens it.
"any new accounts"	Says which bank, credit card or loan accounts appeared in QuickBooks since an earlier sync.
"working capital" · "what's our working capital"	Says working capital, the same figure as the Dashboard card.
"current ratio" · "quick ratio"	Says the ratio, the same figure as the Dashboard card.
"gross margin" · "net margin" · "net margin last month"	Says the margin as a percent, the same figure as the Dashboard card.
"when did we last sync" · "is this current"	Says how fresh the data is.

6. Charts

Say	What happens
"charts"	She asks which chart you want and waits for the name.
"expenses" (after she asks, or any time) or "chart the expenses" · "expense chart" · "show me a pie chart of expenses"	Pops up the top expense categories.
"vendors chart" · "top vendors" · "vendor by spend" · "who do we pay the most"	Spend by vendor for the month: expenses and bills only, never customers.
"income vs expenses chart"	Revenue to net income, step by step.
"cost drivers chart" · "pareto"	The biggest cost drivers.
"revenue by month" · "revenue trend" · "chart revenue"	A card with 12 months of revenue, centered on the month you're reviewing.
"net income by month" · "profit trend"	A card with 12 months of profit or loss, loss months flagged.
"receivables chart" · "payables aging"	Who owes us or what we owe, by customer or vendor and age, with QuickBooks links and what to do.
"show net income trend" · "pull up revenue by month" · "show me the cash outlook"	Saying show or pull up in front of a trend, by-month or outlook chart opens that chart instantly.
"will we run out of cash" · "cash outlook"	A card with the 13-week cash projection and the lowest week.

7. Review mode (work through findings one at a time)

Say	What happens
"start review" · "show me anomalies" · "what needs my attention"	Builds a queue of open findings and opens the first.
"next" · "skip"	Opens the next finding in the queue.
"what's left" · "how many are left"	Says progress.
"check again" · "recheck" · "are we done"	Re-syncs from QuickBooks and rebuilds the queue.
"that one" · "open it"	Reopens the last finding you looked at.
"what were we doing"	Reminds you what you were looking at.
"open it in QuickBooks" · "show me in QuickBooks"	Opens the finding you're on at its exact QuickBooks record, in your browser on the other monitor.
"is it fixed" · "I fixed it" · "check it"	Re-syncs from QuickBooks and tells you whether that finding cleared. If it did, she says how many are left and offers the next one; say "yes" . If not, she says what QuickBooks still shows and the suggested fix.
"yes" · "no"	Answers a question she just asked. If she misheard you, she instantly asks whether you meant the closest command; "yes" runs it.

8. Guided month-end walkthrough (she walks you through the routine, one step at a time)

Say **"start month-end"** (also "start the monthly routine", "walk me through the month"). She goes through 16 steps in the order on the Monthly Routine sheet: for each one she opens the page, reads the numbers, and waits. Steps 3 and 5 are **yours to do in QuickBooks** (matching bank lines, reconciling); she tells you what to do, then re-syncs automatically when you say say next. **Nothing in this mode changes your books.**

Say (only while the walkthrough is running)	What happens
"next" · "done" · "I did that" · "continue" · "skip"	Moves to the next step (after a QuickBooks step it syncs first so the numbers are fresh).
"repeat" · "say that again"	Does the current step again.
"previous step"	Goes back one step.
"where are we" · "how much is left"	Says the step number and how many remain.
"stop" · "end the routine" · "pause"	Ends the walkthrough.

9. Control

Say	What happens
"try again" · "that's wrong" · "never mind" · "scratch that"	Clears her last answer and says Go ahead — then listens.
"hi" · "status update" · "how are things"	A short overview: open findings and dollars.
Tab key	Cuts her off mid-sentence and starts listening.
` key (left of 1)	Closes the open card, so you can click the next one right away.

Things she will not do by voice

She never changes your books by voice. Anything that would write to QuickBooks needs the on-screen confirmation. Voice only opens pages and reads figures.

If she says "I didn't recognize that"

Say the page name ("go to ..."), or a number ("find 1420"), or a question from the tables above. Open-ended questions the table doesn't cover go to the AI model, which may be slower (10–30 seconds).

QuickBooks how-to questions

Ask in your own words, for example how to record a vendor credit, clear payments stuck in Undeposited Funds, merge duplicate vendors, or whether a contractor needs a 1099. She answers from a reference library of QuickBooks Online notes written from Intuit's ProAdvisor training and help pages. If the notes don't cover it, she says so rather than guessing a menu path. These go to the AI model, so they take 10–30 seconds.

Cards

Most answers about money now pop up a card next to her spoken answer: a chart, the records behind it with Open in QBO links, and what to do. "Who owes us", "what do we owe", "find" a vendor, "balance of" an account, revenue, net income, cash, finding groups like duplicates, "what's due" and "any new accounts" all show one. Every card is also on the Charts & Cards page, one click each.

Memory

She remembers the last 20 exchanges, including what she opened for you. When she offers something, such as pulling something up, just say yes.
